PROFESSIONAL SUMMARY

Results-driven Senior iOS Developer with 5+ years of experience architecting and maintaining high-performance, large-scale mobile applications (serving 1M+ active users at Atmosware / Turkcell Group). Proficient in the full mobile development lifecycle with deep expertise in Swift, Objective-C, Cocoa Touch, UIKit, and SwiftUI. Proven track record in modular app architecture (SPM), legacy codebase refactoring (Obj-C to Swift migration), VIPER/MVVM patterns, and low-latency systems engineered via advanced Concurrency and Dependency Injection. Experienced in integrating AI-assisted development workflows (Claude, OpenAI Codex, GitHub Copilot) into the engineering process to accelerate code generation, code review, and test authoring. Adept at driving engineering excellence through Agile leadership and continuous testing. Holds both Bachelor's and Master's degrees in Computer Engineering.

TECHNICAL SKILLS

Core Development & Frameworks: Swift, Objective-C, Cocoa Touch, UIKit, SwiftUI, Combine, Core Data, Core Animation, Core Graphics, Core Text, ObjC-Swift Interoperability

Architecture & Patterns: VIPER, MVVM-C, Modular Architecture (SPM), Clean Architecture, Dependency Injection (DI), SOLID Principles

Concurrency & Performance: Swift Concurrency (Async/Await), GCD, Memory Management (ARC), Instruments (Allocations, Time Profiler, Leaks)

Networking & Security: RESTful APIs, Third-Party SDK Integration, WebSockets, SSL Pinning, Keychain, Secure Network Layering

Testing & Quality: Unit & UI Testing (XCTest), Test-Driven Development (TDD), Code Reviews, Mocking/Stubbing

AI-Assisted Development: Claude (Claude Code), OpenAI Codex, GitHub Copilot, Cursor, ChatGPT, AI-Assisted Code Generation, AI-Driven Code Review & PR Analysis, AI-Assisted Unit/UI Test Generation, Prompt Engineering for Developer Workflows

DevOps, Tools & Methodologies: CI/CD (Jenkins, Fastlane), Git (GitFlow), CocoaPods, Firebase Crashlytics, Jira, Scrum Master

PROFESSIONAL EXPERIENCE

iOS Developer | Atmosware (Turkcell Group)

01/2022 – Present

- Architected, developed, and refactored core features for the Fizy application serving 1M+ active users, leveraging VIPER/MVVM patterns and a modular architecture with Swift Package Manager (SPM) to maximize scalability.
- Managed seamless interoperability between legacy Objective-C modules and Swift codebases, executing phased migrations and bridging with zero production downtime.
- Implemented fluid UI components and complex animations using UIKit, Core Animation, and Core Graphics to guarantee consistent 60fps rendering under heavy data streams.
- Designed persistent, offline-first data structures and caching mechanisms utilizing Core Data and thread-safe persistence strategies.
- Optimized UI responsiveness and network throughput under peak traffic by resolving complex asynchronous workflows with Swift Concurrency (Async/Await) and GCD.
- Decoupled legacy systems and minimized technical debt by establishing robust Dependency Injection patterns across modular packages.
- Accelerated Objective-C-to-Swift migration and day-to-day feature development by integrating AI coding assistants (Claude, OpenAI Codex, GitHub Copilot, Cursor) into the workflow, cutting boilerplate implementation time by 20-25%.
- Built AI-assisted code review and automated unit/UI test generation flows using Claude and ChatGPT, reducing PR turnaround time by 25% and increasing test-authoring throughput by 30%.
- Sustained 99.9% crash-free sessions across major production releases by diagnosing performance bottlenecks and memory leaks with Xcode Instruments and Firebase Crashlytics.
- Automated end-to-end App Store build and deployment pipelines using Jenkins CI/CD, reducing release cycle overhead by 25%.
- Facilitated Agile/Scrum ceremonies as Scrum Master, driving sprint predictability, cross-functional alignment, and high-velocity delivery.

Software Developer | Kapsul Teknoloji

01/2021 – 01/2022

- Designed and engineered the "Kapsul Mobil" application entirely from scratch, independently managing the end-to-end mobile development lifecycle from architecture to App Store deployment.
- Researched and integrated native AI-driven image processing modules utilizing Core Graphics and custom image-rendering pipelines.
- Integrated RESTful APIs, third-party libraries, and push notification services to support real-time data synchronization.
- Mentored 50+ students in structured "Algorithm 101" workshops, accelerating core algorithmic thinking, data structures, and software fundamentals.

EDUCATION

- Thesis-Based Master's Degree in Computer Engineering – Selcuk University (2024)
- Non-Thesis Master's Degree in Computer Engineering – Selcuk University (2023)
- Bachelor's Degree in Computer Engineering – Selcuk University (2022)
